

BC-415

PRODUCT DESCRIPTION:

Hydrogen Sulfide Scavenger

TYPICAL PROPERTIES:

Appearance	Liquid
Specific Gravity	0.915 @ 77° F
Flash Point	76° F
Pour Point	-5° F
Activity	53%

PRODUCT USES:

BC-415 is an oil soluble, concentrated H₂S scavenger that reacts with H₂S and mercaptans. BC-415 will react with both components. This product can be diluted with solvents such as HAN and xylene. It can be used in a "bubble tower" or continuously injected. Laboratory studies indicate BC-415 is comparable in performance with other commercial products. It does not exhibit solids deposition at the rate of typical formaldehyde based products on the market.

APPLICATION GUIDELINES:

BC-415 is typically used at .050 gallons per part per million of H₂S per million cubic feet of gas treated. In oil, the usage rate varies from 6 to 18 ppm BC-415 to 1 ppm H₂S.

AVAILABILITY:

BC-415 is available in drum and bulk quantities.
